## MOFFETT BOULEVARD: COMPLETE STREETS IMPROVEMENTS

The City of Mountain View has plans for roadway repaving, including bikeway improvements on Moffett Boulevard north of Middlefield to Clark. In a virtual community meeting on June 21st, 2022, feedback was generated from twenty residents in attendance. Residents who could not attend provided feedback via email; eight emails were received. Over 1,700 postcards were sent out along with email and MyMV messaging.

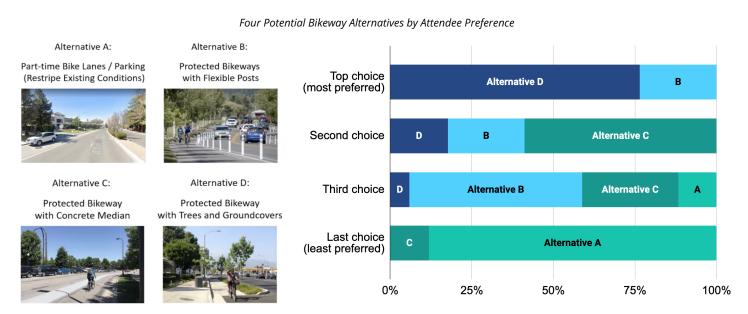

## **CURRENT STATUS & FUTURE VISION**

Residents were first asked which words came to mind when thinking of the project area, and they reported viewing the area as **dangerous** with **freeway ramps** but with access to **Stevens Creek Trail**. Residents were then asked which words describe their future vision for the area. Residents indicated **safe bike lanes** and **green space**.

## **BIKEWAY ALTERNATIVES**

Residents were asked to rank four bikeway alternatives for the project area in order of preference.

The majority (76.5%) of participants listed a **protected bikeway with trees and groundcovers** (Alternative D) as their top choice. Participants expressed interest in using **native plants** watered with **greywater**. The remaining 23.5% of participants preferred **protected bikeways with flexible posts** (Alternative B). No participants selected restriping existing conditions (Alternative A) or a protected bikeway with a concrete median (Alternative C) as their top choice. Most residents (88.3%) indicated restriping existing conditions (Alternative A) as their last choice.
